

Roshan - Sales Director

Parva Foam and Packaging Technologies

EXCLUSIVE PARTNERS AND SUPPLIERS OF ZOTEFOAMS IN INDIA

Accepting uniquely engineered solutions and looking out for a technologically better product has gained popularity in the Indian packaging sector, primarily functioning as an unorganised sector. The packaging industry in India is expected to grow at a CAGR of 26.7%, with Quality differentiation and Compliance Authentication being two crucial areas for the global and partially domestic market. There are very few manufacturers across the globe having patented processes in their packaging and manufacturing procedure to provide high-quality foams with multiple industrial utilities. Parva Foam and Packaging Technologies is an emerging name in the Indian packaging industry, with its sight set on becoming the apex service provider in India. It is a turnkey solution provider capable of designing packages under the product specifications of its consumers.

Mr Roshan Sannappa, Sales Director for Parva Foam and Packaging Technologies, says, "Commitment, Integrity

and Persistence plays a crucial role in the value created by ParvaFoam in the market. Most of the time customers underestimate the complexity of the foam-specification process, we at Parva Foam and Packaging Technologies use each sales enquiry to educate potential customers about the importance of selecting materials based on the end application. Our message for the customers is by all means contact us when you think you need 'just' a sheet of foam, for your development or commercial volumes, but you will discover that we can provide so much more, from guidance in choosing the right foam to a complete value solution beyond engineering and logistics."

In-house scope of Customising Packages

Roshan says, "Currently, we have an operational and manufacturing facility located in Bangalore. We are utilizing the various technologies for manufacturing and conversion including die punching machine, CNC based milling machines, Horizontal Slicing and Vertical slicing machines, Thermal Laminating machines to process the raw materials of foam and other packaging accessories to produce end finished products and can now do more than 1lac foam inserts in a month as per consumer needs. In this pandemic period, we have invested heavily in infrastructural development on equipment and facility for raw material inventory. Parva Foam & Packaging Technologies"— which is an authorized Indian exclusive business partner for the AZOTE® range of polyolefin foams from Zotefoams plc, the world leader in closed cell, crosslinked foams. These foams are used extensively in a host of markets, including automotive, aerospace, product protection, industrial parts, marine, construction, military, medical, and sports and leisure, foams are widely used for specific product protection applications, such as preventing electrostatic discharge (ESD), skin contact applications globally."

We are geared up to deliver com-

plete packaging solutions to customers on a commercial scale- high quality XLPE foams converted into any end component based on customer requirements, XLPE foam trays with specific electronic applications which are anti-static or conductive volumetrically can be produced on a large scale for specific electronic storage and packaging, -die punched foot insoles for medical applications is a ready solution for insole customers, foam padded boxes made up of aluminum, honeycomb panels, PP corrugated sheets, wooden boxes for shipping of critical or sensitive products is a offering we have in our portfolio. Foam fitment along with Pelican cases used specifically in defense applications could be delivered. With our huge inventory for customers, we greatly reduce the turnaround time for deliver, thus reducing the effort for customers to stock up inventory and we could delivery their requirements in a staggered way based on their packaging timeslots of manufacturing, hence we are a one stop solution for our valuable customers when it comes to specialized custom packaging as well.

Roadmap Ahead

Roshan concludes, "We are focused on consumer education and making them aware of the utility of technology and engineering in the packaging industry. Customers prefer innovative packaging in terms of an increase in product stability, re-usability with aesthetic values. We aim to obtain ISO certification along with several Lab accreditations and excelling our compliance requirements as per the global standards. We aim to be the top 5 complete packaging solution providers in the Asian market and being among the top 3 in India. The company's investments are not limited to its aspirations for the Indian market. We are focused on creating significant global credibility for Parva Foam and Packaging Technologies." ||
